

The PSA project IDACS has made the following agreement about the format from ID's for electric mobility. This agreement was made during the IDACS consortium meeting 22nd May 2019.

## 1 Conclusions on discussions about ID format

Taking into account feedback during discussions with market parties on the current ID setup and format as used by ISO15118-2:2014 and eMI3 (part one with country code and company abbreviation and part two with remaining characters), the following conclusions have been drawn:

- The current used format/syntax as described in the figure below, is used by many CPO's and MSP's
- Many companies are satisfied with current format
- There are market companies that discern several limitations and have certain desires concerning the current ID setup
- Currently no common agreement is expected on short term on an alternative ID format and a majority of consortium members see no need for it
- ID issuing in Europe is crucial and needs to be done in or on behalf of all countries
- For ID issuing organisations, the format is not an obstacle – every format can be issued, although agreement between these organisations about the used and issued format is important.
- The transition to an alternative format requires international alignment with market players and possibly with standardization bodies.

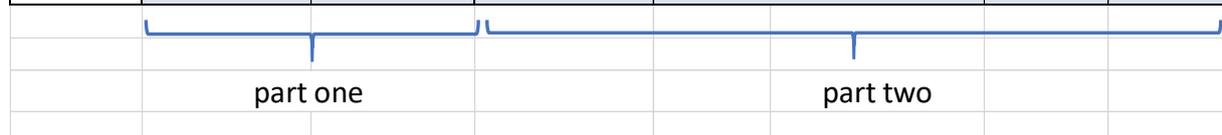

## 2 Decision on ID format part 1 (first 5 characters) and 2 (remaining characters)

During the IDACS Consortium meeting which was held on the 22<sup>nd</sup> of May 2019, the following decisions have been made and agreed upon

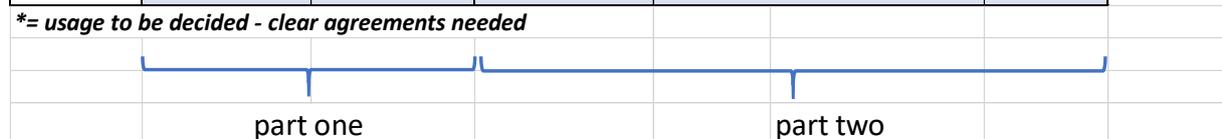

- Agreement to use the current format (see figure below) for part 1 and 2 as this is adequate for European ID issuing organisations and usable for the market.
- Business rules are required for the use of the ID format, including ways how to use the format. It need to be decided upon with specific attention for:
  - optional characters (make it mandatory or remove)
  - ID Type character in part two of the ID code
- Possible changes in the future can be processed based on consensus

A separate note will be drafted in the coming months to reach consensus on the optional characters and ID Type character.

<i>Issued by:</i>	ID Registration Organisations (IDRO)		Emobility Provider (EMP)			
	<i>Description</i>	Country	EMP	Type*	Contract ID instance	Check digit*
<i>Example</i>	AT	EVB	C	12A23GHI	3	"_"
<i>Explanation</i>	2 characters (alphanumeric) [ISO 3166-1 alpha-2]	3 characters (alphanumeric) [A-Z;0-9]{5}	1 character type identifier (alphanumeric) [A-Z]{1}	Up to 9 characters (alphanumeric) [A-Z;a-z;0-0]{9}	Calculated digit	

<i>Issued by:</i>	ID Registration Organisations (IDRO)		Charge point operator / unit (CPO)		
	<i>Description</i>	Country	CPO or LOC	Type*	Power outlet ID
<i>Example</i>	FR	EDF	E	2542AX8769	"_"
<i>Explanation</i>	2 characters (alphanumeric) [ISO 3166-1 alpha-2]	3 characters (alphanumeric) [A-Z;0-9]{5}	1 character type identifier E for EVSE or P for Pool (alphanumeric) [A-Z]{1}	Up to 30 characters (alphanumeric) [A-Z;a-z;0-0]{9}	

The above mentioned agreement and decisions, that are agreed during the consortium meeting 22<sup>nd</sup> May will be validated by the IDACS steering group. Part of the final document for the steering group is explanation of the followed process.
